
Case Study

Porsche Design Tower

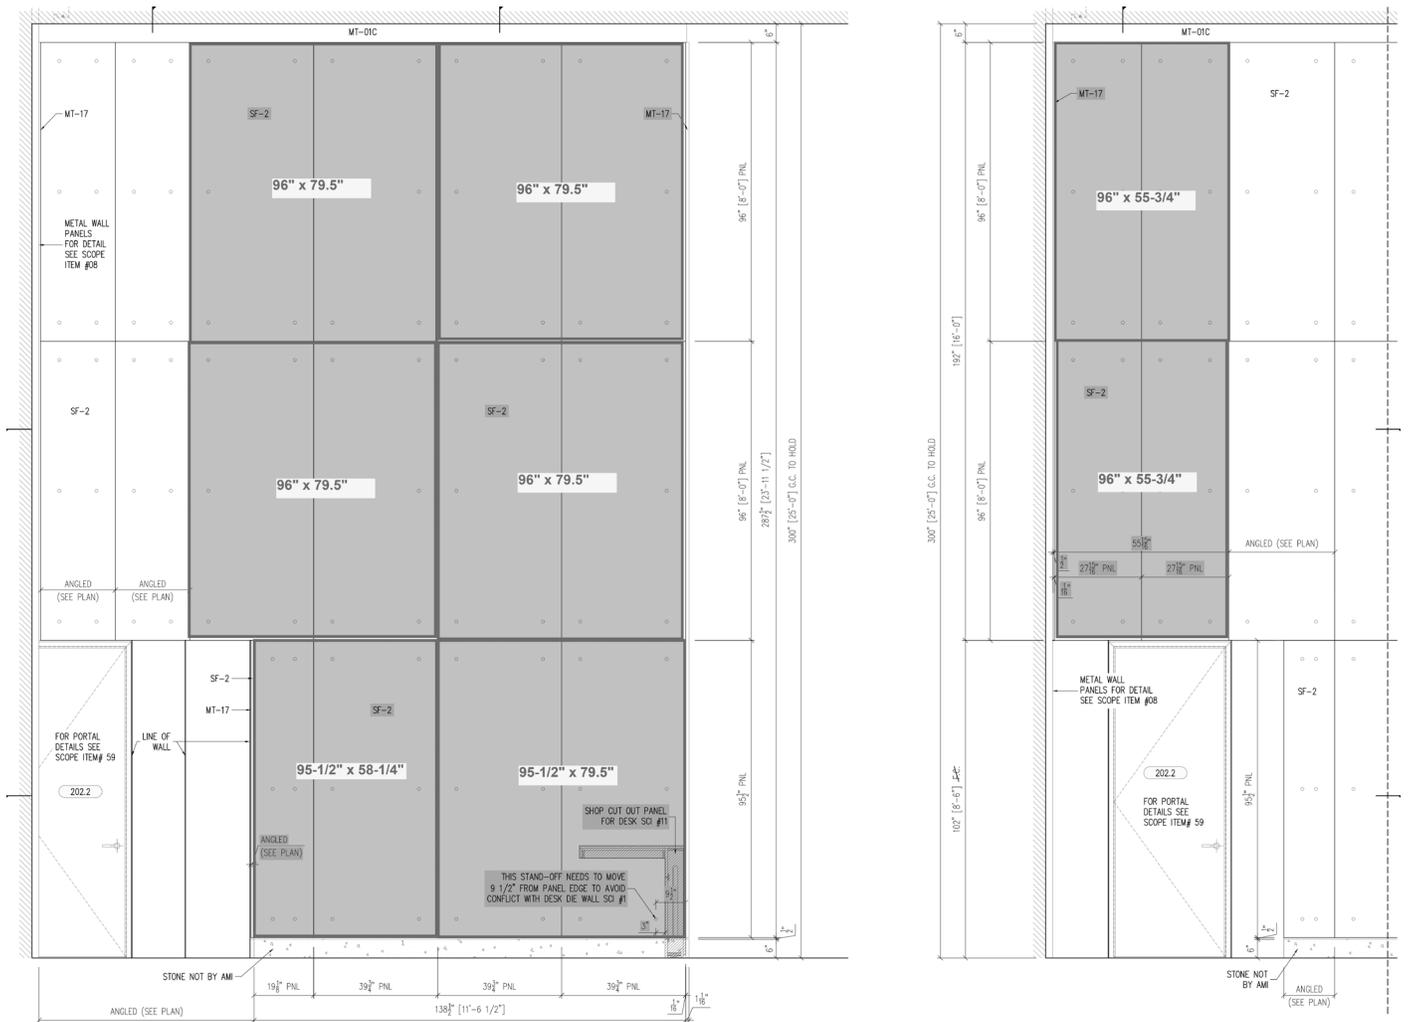

Miami, Florida

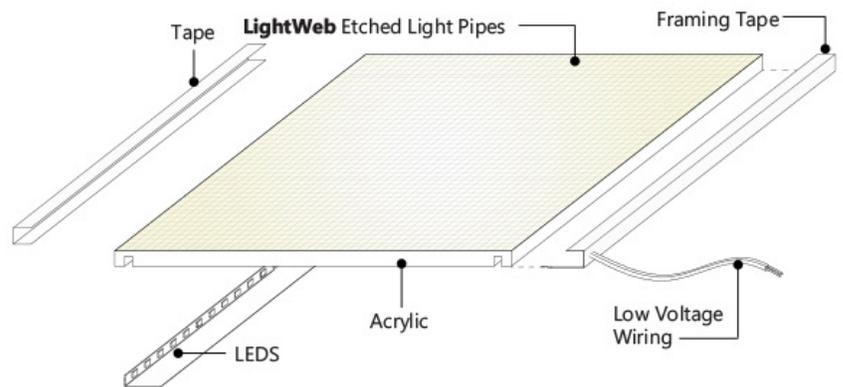

The Porsche Design Tower in Sunny Isles Beach Florida is a 60-story skyscraper featuring 132 ultra-luxury residential units with Spectacular Ocean and City views. The building's unique design features a glass exterior cylindrical tower with patented "Sky Garage" Elevators that take residents to their apartments while remaining in their cars. The building sets innovative standards in luxury apartment design for the integration of these one of a kind car lift.

The interior Design of the lobby space highlights feature walls backlit with the eos BASIC LightPanel™ System. We worked closely with interior designers and contractors to coordinate the design and integration of our panels to backlight a unique and symmetrical aluminum foam material created by Allusion™

BASIC LightPanel™ System

The color of the aluminum panels are exclusive to Porsche and are complemented by our Basic LightPanel™ in 5300k Clean White.

The integration of our oversized eos LightPanel™ System and the 96" x 40" Open Cell Aluminum Panels come together to create translucent light-weight feature walls with highly reflective surfaces and symmetrical lines matching the interior.
