
Case Study

Los Angeles Athletic Club

Los Angeles, CA

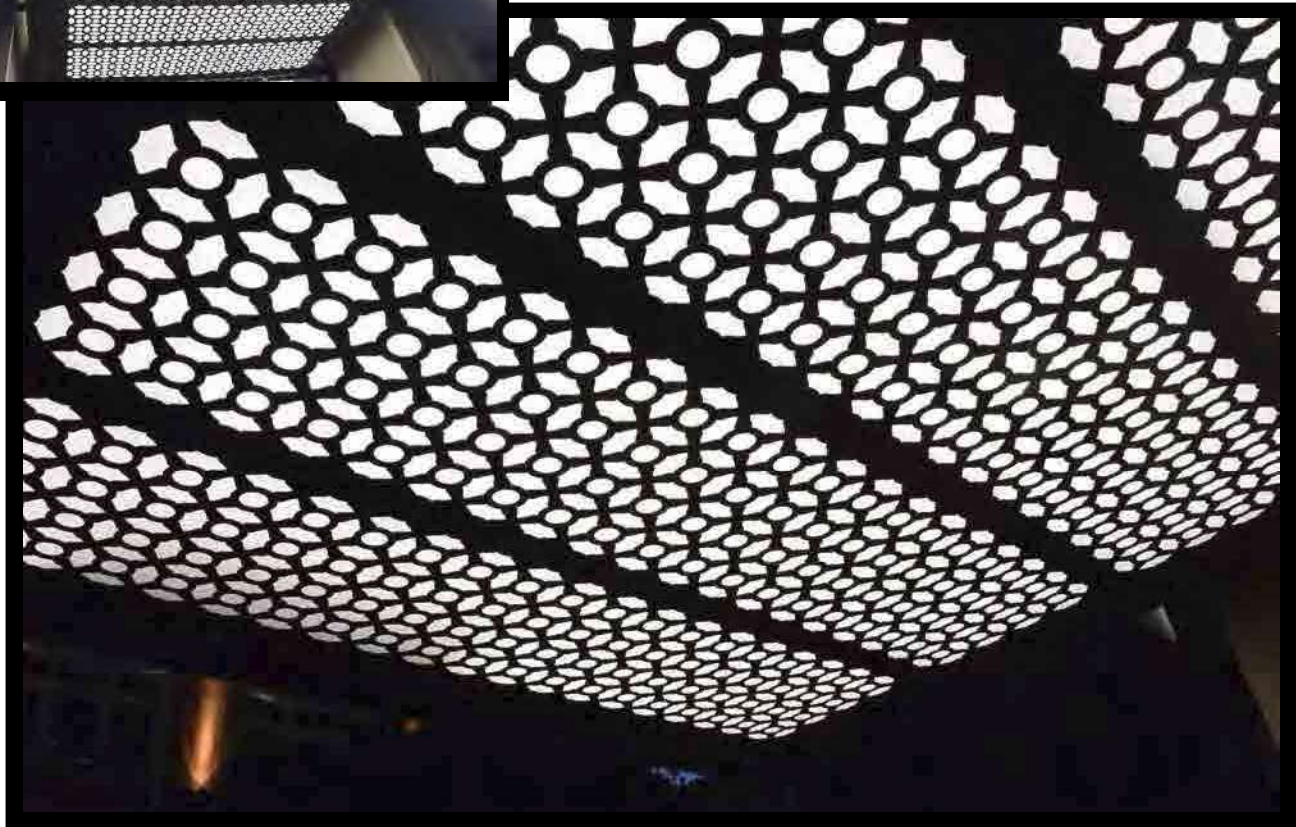

For more than 125 years, The Los Angeles Athletic Club has offered premium, upscale services to its members from the heart of Downtown L.A. The private club includes state-of-the-art athletic and spa facilities, award-winning restaurants, bars, luxury meeting, conference, and hotel rooms, and an array of social, business, and athletic events.

The entrance of the club creates its first impression, and when the club decided to renovate, they entrusted EOS Light with the job. They chose the equivalent of our new EOS Metal, i.e. use of textured metallic sheets that are backlit with our Outdoor Basic LED LightPanels.

Ten Oversized Basic Outdoor EOS LightPanels in four different sizes were used for uniform coverage to illuminate the decorative, metallic, textured panels.

EOS Light was able to meticulously and precisely custom-fit its Outdoor LightPanels and the metal textures within the T-Grid System of the exterior entrance overhang. This attention to detail is typical of EOS Light installations, for a beautiful fit and finish when the project is concluded.
