## Installation methods:

## Added Details:

- Thickness of 90mm (3.6") allows LEDs along the perimeter of the profile and for fabric to be placed on both sides of the fixture (similar to our crystal light panels, with the exception of the see through).
- Allows single color and RGBW
- Allows single color along perimeter of profile
- These are lighter weight and would be better for pendant hanging applications.
- This also allows a backer to be included for a backlit module (RGBW), however, if that is desired, consider the FL-18D.
