

## ► Aura Stone LightPanels

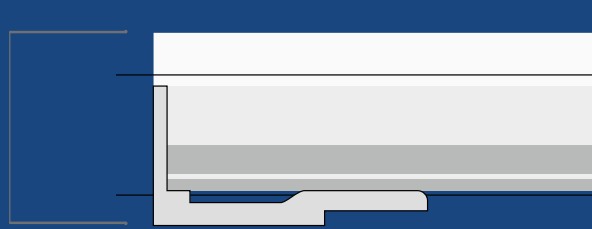

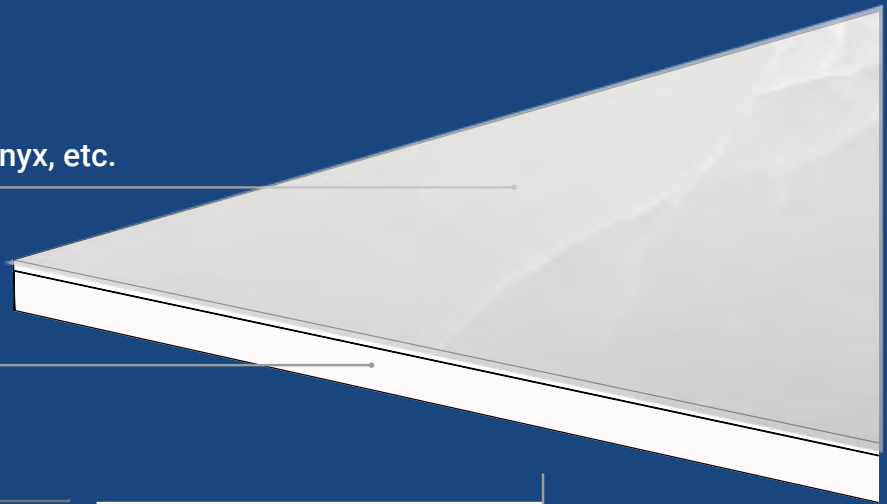

### Complete Edge-to-Edge Solutions

The AURA Stone LightPanel System is a complete backlit solution – specifically for walls, backsplashes and modular applications – that utilizes our LightPanel to uniformly distribute light edge-to-edge behind a stone or other Earth texture to provide an even beautiful glow. The AURA Stone LightPanel allows designers to have a clean, textured acrylic face and glowing edge with the aluminum profile hidden.

Natural Texture, e.g. Onyx, etc.

Aluminum Profile

7/8"

AURA LightPanel Systems, in general, are complete backlit solutions utilizing EOS LightPanels which uniformly distribute light edge-to-edge and provide an even beautiful glow. When surfaced with one of our dozens of AURA Stone selections, this transforms the appearance to that of internally lit natural materials (onyx, alabaster, geodes and agate.)

The AURA Stone LightPanel System allows designers to, therefore, have a lit acrylic face that looks natural and which glows while keeping the aluminum profile hidden.

Suited for use in large number of **applications:**

Hospitality

Retail

Healthcare

Residential

Accent Lighting

Branding

Commercial Interior

Millwork

Custom Fixtures

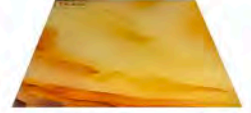

Task Lighting

# BOOKMATCHING AVAILABLE\*

EOS can simulate the appearance that a natural stone was cut in half, with each half installed facing the other and joined at the seam, for a nearly-mirrored or a continuous asymmetric look called 'bookmatching.'

\*Bookmatching available on select patterns as noted on pages 3 & 4.

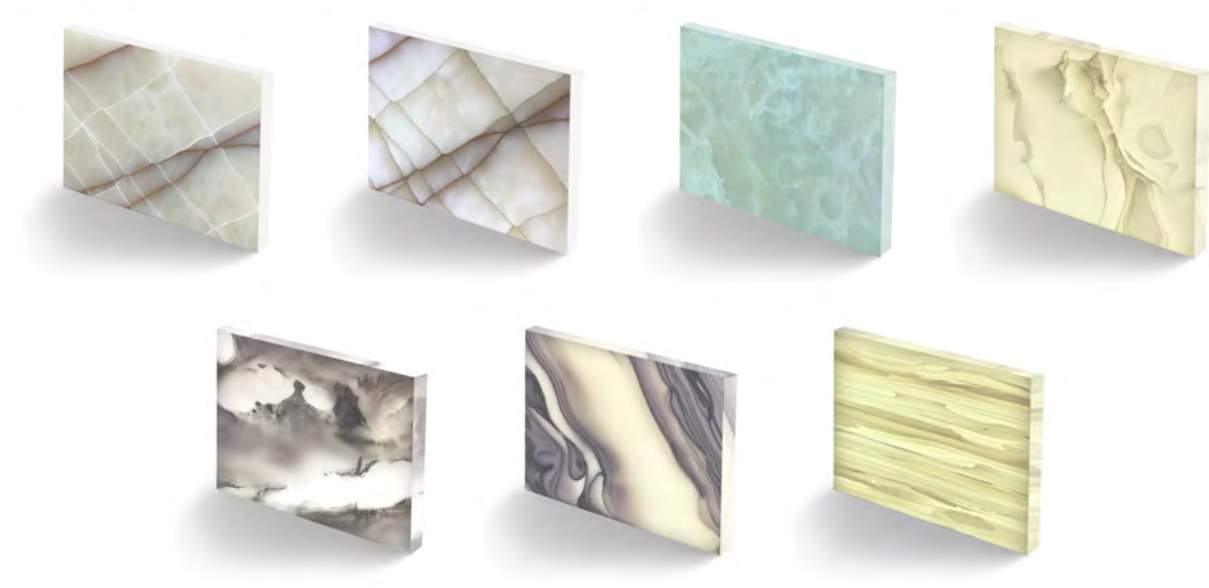

# INHERENT PATTERN VARIABILITY

Just as in nature, our faux stone materials vary in texture and pattern. None are quite exactly like the next, so the swatches and examples merely closely approximate the look of the final pattern.

## ADDITIONAL OPTIONS

Beyond our standard options, EOS is likely to be able to provide examples of other natural patterns and types, if one of these inspires you with thoughts of something similar. Please inquire with your EOS rep for non-standard, additional options.
